

METHOD OF OPERATING A VIRTUAL PRIVATE NETWORK

5

Abstract of the Disclosure

10 A method of operating a virtual private network includes the steps
of: (a) dialing a custom number; (b) receiving the custom number at a
switch (20) of a first carrier; (c) routing the call to a switch (18) of a
second carrier based on having received the custom number; and (d)
when the call to the switch (18) of the second carrier includes a plain old
telephone number translation of the customer number, routing the call
15 over the second carrier to a service switching point (26) of a third
carrier.
